DETAILED ACTION

Status of Claims

1. Applicant had canceled claims 1-23 in the preliminary amendment filed 19 October 2001. Thus, claims 24-32 remain pending and are presented for examination.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 24-27 and 29-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kohut, U.S. Patent No. 6,246,769 B1.

As per Claims 24 and 29, Kohut discloses a secure user code entry interface system comprising:

- a secure user code entry interface for entry of a user code on an electronic device (Figure 6) wherein said electronic device has a display (Figure 6); wherein said secure user code entry interface contains at least one active display for entry of at least one digit of said user code by a user (Figure 6; Col. 10, lines 47-67; Col. 12, lines 20-25; Col. 14, lines15-20); wherein said active display illuminates at least one display digit within said active display and said user enters said at least one digit of said user code by a response through an input device at a response time when said at least one display digit which corresponds with said at least one digit of said user code is illuminated in said active display (Figure 6; Col. 10, lines 47-67; Col. 12, lines 20-25; Col. 14, lines 3-25).

Kohut further discloses a run on time to extend the at least one active display (Col. 14, lines 20-25 and 60-63), however, fails to explicitly disclose that the run on time is random. However, examiner submits that it would have been obvious to one having ordinary skill in the art at the time of applicant's

Page 3

invention to add a random run on time to extend the display depending on how long it takes the user to enter the user code.

As per <u>Claim 25</u>, Kohut further discloses wherein the response is entered by keying any one of a plurality of keys on a keyboard (Figure 6; Col. 14, lines 15-20).

As per <u>Claims 26-27</u>, Kohut fails to explicitly disclose wherein the response is entered by keying any one of a plurality of keys of a mouse or areas of a touch sensitive display. Examiner takes Official Notice, however, that use of a mouse or a touch sensitive display was well known to one having ordinary skill in the art at the time of applicant's invention and it would have been obvious to use any one of these types of input devices to allow the user to input the user code.

As per <u>Claim 30</u>, Kohut discloses an identity verification secure transaction system comprising:

- a host computer for storing a user code associated with a user (Figure 6; Col. 10, lines 55-65; Col. 11, lines 30-35);
- an electronic device in electronic communication with the host computer, wherein the electronic device has a display and a user input device (Figure 6; Col. 14, lines 1-20);
- a secure user code entry interface viewable on the display of the at least one electronic device for entry of a user code (Figure 6); wherein said secure user code entry interface contains at least one cycle with an active display for entry of said user code by a user (Figure 6; Col. 10, lines 47-67; Col. 12, lines 20-25; Col. 14, lines15-20); wherein said active display illuminates at least one display digit within said active display and said user enters said at least one digit of said user code by a response through an input device at a response time when said at least one display digit which corresponds with said at least one digit of said user code is illuminated in said active display (Figure 6; Col. 10, lines 47-67; Col. 12, lines 20-25; Col. 14, lines 3-25);
- wherein the entered user code is transmitted to the host computer for verification with the stored user code (Figure 6; Col. 14, lines 15-25).

Kohut further discloses a run on time to extend the at least one active display (Col. 14, lines 20-25 and 60-63), however, fails to explicitly disclose that the run on time is random. However, examiner submits that it would have been obvious to one having ordinary skill in the art at the time of applicant's invention to add a random run on time to extend the display depending on how long it takes the user to enter the user code.

As per <u>Claim 31</u>, Kohut further discloses wherein the response is entered by keying any one of a plurality of keys on a keyboard (Figure 6; Col. 14, lines 15-20).

As per <u>Claim 32</u>, Kohut fails to explicitly disclose wherein the response is entered through any area of a touch sensitive display. Examiner takes Official Notice, however, that use of a touch sensitive display was well known to one having ordinary skill in the art at the time of applicant's invention and it would have been obvious to use a tough sensitive display to allow the user to input the user code.

4. Claim 28 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kohut, U.S. Patent No. 6,246,769 B1 in view of Weisz et al, U.S. Patent No. 6,148,406.

As per <u>Claim 28</u>, Kohut fails to explicitly disclose wherein the secure user code entry interface program contains a plurality of cycles of the at least one active displays for entry of each digit of the user code. Weisz et al disclose an access control password generated as a function of random numbers and further teach wherein the secure user code entry interface program contains a plurality of cycles of the at least one active displays for entry of each digit of the user code (Figs 1-8; Col. 6, lines 10-35; Col. 8, lines 25-30).

Conclusion

5. **Examiner's Note**: Examiner has cited particular columns and line numbers in the references as applied to the claims below for the convenience of the applicant. Although the specified citations are representative of the teachings in the art and are applied to the specific limitations within the individual

Application/Control Number: 09/982,102

Art Unit: 3621

claim, other passages and figures may apply as well. It is respectfully requested that the applicant, in preparing the responses, fully consider the references in entirety as potentially teaching all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the examiner.

Page 5

- 6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- Covert discloses a computer access security device and teaches displaying an array of digits and a user selects a multi-digit code based upon a secret code (PIN).
- Baker discloses a password entry system wherein a user selects either a row or a column of a pseudorandom matrix based upon a memorized password

7. Any inquiry concerning this communication or earlier communications from the examiner should

be directed to John Hayes whose telephone number is (703)306-5447. The examiner can normally be

reached Monday through Friday from 5:30 to 3:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jim

Trammell, can be reached on (703) 305-9768.

Any inquiry of a general nature or relating to the status of this application or proceeding should be

directed to the receptionist whose telephone number is (703) 308-1113.

Any inquiry of a general nature or relating to the status of this application or proceeding should be

directed to the Receptionist whose telephone number is (703) 305-3900. Information regarding the

status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system.

Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only. For more

information about the PAIR system, see http://portal.uspto.gov/external/portal/pair. Should you have

questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-

217-9197 (toll-free).

Please address mail to be delivered by the United States Postal Service (USPS) as follows:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

or faxed to:

(703) 872-9306 [Official communications; including

After Final communications labeled

"Box AF"]

(703) 746-5531 [Informal/Draft communications, labeled

"PROPOSED" or "DRAFT"]

Hand delivered responses should be brought to Crystal Park 5, 2451 Crystal Drive, Arlington,
